Methodology and Study Plan:-

The data would be collected from primary and secondary sources. The primary sources would constitute Individual and use of internet, and secondary sources would include the articles from scholarly journals or presented papers as well as the internet web pages would be the part of secondary sources. The data would be collected and presented and compiled with comparison to draw the inferences to decide the priority and significance of both theses study. It also tells causes of addiction. For meaningful analysis and for making valid recommendations based on the findings of the study, statistical tools like ratios, percentages, arithmetic averages, trends etc., wherever necessary are to be used in the study. Tables and graphs will be used to substantiate the inferences made in the study.

**Primary Resources:** - In primary sources survey technique, questionnaire technique, interview technique will be used. Interviews of students based on internet. Besides this survey, observation, questionnaire and analytical methods will be used.

A) **Survey technique:** - Survey method will be used by means of questionnaires to collect the information about internet. On the basis of this information further arrangement of the research will be done.

B) **Interview technique:** - Interview will be taken with the help of questionnaires and by means of it the information will be collected. For this quota method and classified sampling method will be used.

C) **Data Analysis:** - Analysis of the collected data and statistical data will be done by using various statistical techniques, and then on the basis of this analysis hypothesis will be verified.

D) **Observation:** - by using Observation method collect information by observing kids without interview.

**Secondary Resources:** - Library method will be used in secondary resources use of different English, Hindi, Marathi newspapers, magazines, periodical gazettes, Government reports, survey of various institutions and their reports, internet and will be studied.

In this way by using primary and secondary resources the cyber addiction will be studied among the kids.

There are so many methods of research. We have followed applied research Methodology. I will create web sites model which collect the details of teen age kids, and parents with their login id
and password. Model shows much percent kids gets addicted towards internet and they want help from any expert then they communicate with expert.

**The Study Plan**

The study will be divided into two parts. The first part of the study would deal with the theoretical review of literature on Internet Addiction and reasons and present status of addiction. The second part contains the empirical analysis of collected data. For that

Step 1:
First visit all the schools’ after face to face interview there provide questionnaire for kids and parents.

Step 2:
Collecting data from students and parents using questionnaire form.

Step 3:
Data collected from primary sources will be analyzed using computer based statistical analyzing software viz. SPSS.

Step 4:
By the result obtained using chi square test table the hypothesis will be tested and proved.

Step 5:
Based on acceptances of valid hypothesis objectives will be achieved and hence general conclusion will be made.
