The Objectives of Research Study

1. Risk Assessment is to evaluate the adequacy of the Information System’s security. This Risk Assessment provides a structured qualitative assessment of the operational environment.

2. The objective of performing risk assessment is to enable the organization to accomplish its missions.

3. Better securing the IT systems that store, process, or transmit organizational information

4. By enabling management to make well-informed risk management decisions to justify the expenditures that are part of an IT budget.

5. Assisting management in authorizing the IT systems on the basis of the supporting documentation resulting from the performance of risk management.
