Hypothesis
Based on review of literature and general observation it is hypothesized that:

1. Level of IT infrastructure availability in rural academic college libraries would be lower than in urban academic college libraries located in jurisdiction area of Mumbai University.

2. Library professionals in urban academic college libraries will have a more positive attitude to use of IT in libraries as compared to library professionals in rural academic college libraries.

3. In urban as well as rural academic college libraries, library professionals with computer and IT training will have more positive attitude towards use of IT in libraries.

4. In urban as well as rural academic college libraries, library professionals involvement in decisions related to implementation of IT will influence their attitude towards to use of IT in libraries.

5: Expenditure on IT would be higher in urban academic college libraries located in jurisdiction area of Mumbai University as compared to rural academic college libraries.
