2. METHODOLOGY OF THE STUDY:

The study will be based on primary as well as secondary data. The methods of the study will be analytical and critical supplemented by statistical surveys and empirical studies. The data will be tabulated and presented in both the numbers and percentages.

(i) Sample

The sample will be chosen from the important districts of Bihar which has witnessed substantial inflows of foreign direct investment in recent years. The study will be based on large sample data choosen from from secondary sources like Annual Survey of Industries (government of Bihar and government of India), National Information Centre (government of India). It will also be collected from government reports, journals, newspapers; survey of industries, National
Sample Survey organization data etc and primary data interview and questionnaire (sample size 40) will be chosen from Patna district on convenience basis. The study will be focused on globalization period.

**Statistical Techniques:**

Some of the important tools will be applied including standard deviations, productions and management wherever felt appropriate. To estimate the growth rate of various variables during entire study period a simple yearly increase will be considered. To arrive at single equation regression estimates of size, leverage, growth, assets composition, earnings variability, liquidity, dividend payout ratio will be used. To identify the factors determining the effect of the independent variables on the local markets, the data on deferent variable will be analyzed. Statistical software will be used to analyze the data to find the results. The result will be tested through statistical test like chi square test, z test and t test. The validity of the result will also be tested.
