**Research Methodology:**

The study depends on primary data supported by secondary data which were obtained by field survey of a sampled area while secondary data was obtained from government published and unpublished record. (and books, research journals, newspaper, internet etc. were used.) The villages of Fatehabad and Hisar are select for intensive field survey. A questionnaire is used to find out the problems faced by the landholders due to land acquisition.

Both closed and open ended questions will prepare for the purpose. The respondents are farmers, who have been offend by land acquisition. For the purpose of analysis correlation, regression and tests like Z-test, chi-square will be used.

500 samples will be taken.

**Study Area:**

Fatehabad and Hisar districts are choose for this research is located in Haryana at a distance of about 150-180 km from capital city of Delhi. The boundary of Fatehabad and Hisar touches the states Rajasthan and Punjab. A village Gorakhpur is selected for study as a sample which is located in District Fatehabad. Another sample is choose from district Hisar. The villages near Hisar affected by land acquisition is selected for Research. The village Gorakhpur is situated at about 28 kms from the Fatehabad District. All other villages that surround Gorakhpur (Kumharia, Kajalheri, Jandali, Daman) are agricultural villages. In Gorakhpur most of inhabitants depends on agriculture. The village khedar is selected from district Hisar is located.....km from Hisar. Khedar and surround Khedar (Kirodi, Shyamsukh) are completely depends on agriculture.
